

Effective return to work practices

Believing in
RTW

Ease and
effectiveness

You

Influencing
the (line)
manager

The issues

1. Being away from work for long periods is a significant health risk.
2. People with compensation claims have worse health outcomes than those who have the same condition without compensation.

Both require action to change. This website provides information and resources to help improve outcomes.

The information on this site is designed for employees and their families, RTW coordinators and managers, supervisors, human resource staff, senior managers, claims and injury managers, treating practitioners including doctors and physiotherapists, unions, rehabilitation professionals and policy makers.

For further information on this site please contact roberthughes@resworks.org.au

The Return To Work Knowledge Base is sponsored by: [Return To Work Matters Pty Ltd](#)

Research and Resources on Return to Work

This site is designed to help with return to work. The information is evidence based and encourages best practice and cooperation. It includes:

1. Research papers translated into plain language. The articles can be browsed in interest group collections - employee, employer etc. Alternatively all articles can be seen via the 'View all Articles' tab. On the summary pages the article title is the link to the full text. A search facility is available on all pages.
2. Resources - links to useful information on work disability such as patient handouts, work disability reports, treatment guidelines. The link to the Resources Page for each group is at the top of the left navigation menu on the summary pages.

The site is designed to inform the reader and to encourage sharing of information with others.

Further information, details on navigating the site and how to share information with others is in the article on [how to use this site](#).

The neck vs. the shoulder

[NECK](#) [TREATMENT APPROACHES](#)

Dr Mary Wyatt | Why we should look carefully.

The neck and shoulder are linked and influence one another. Sometimes it can be difficult to sort out the primary problem. Why does this matter? Because treatment for one won't help - if the problem is being caused by the other. Treatment can include surgery. Unnecessary surgery is obviously unnecessary, but can result in delays in appropriate treatment and complications from the surgery itself. [more >>](#)

The sciatica of the neck - another version of radiculopathy.

Dr Mary Wyatt | A closer look at one type of neck pain.

Pressure on the nerves as they exit the neck causes pain in the arms and hands. This is called radiculopathy. It can be caused by a herniated disc or a narrowing of the space through which the nerves pass.

How much is injury and illness really...

Influence
the (line) manager

Influencing the (line) manager – why?

Study one – IWH systematic review

- Educating supervisors and managers
- Is one of the seven workplace based interventions that makes a difference

Study two – Liberty Mutual

- 47% reduction in new claims and an 18% reduction in active lost-time claims
- Versus 27% and 7%, respectively, in the control group.

Shaw, W. S., M. M. Robertson, et al. (2006). "A controlled case study of supervisor training to optimize response to injury in the food processing industry." *Work* **26**(2): 107-14.

Supervisors and return to work

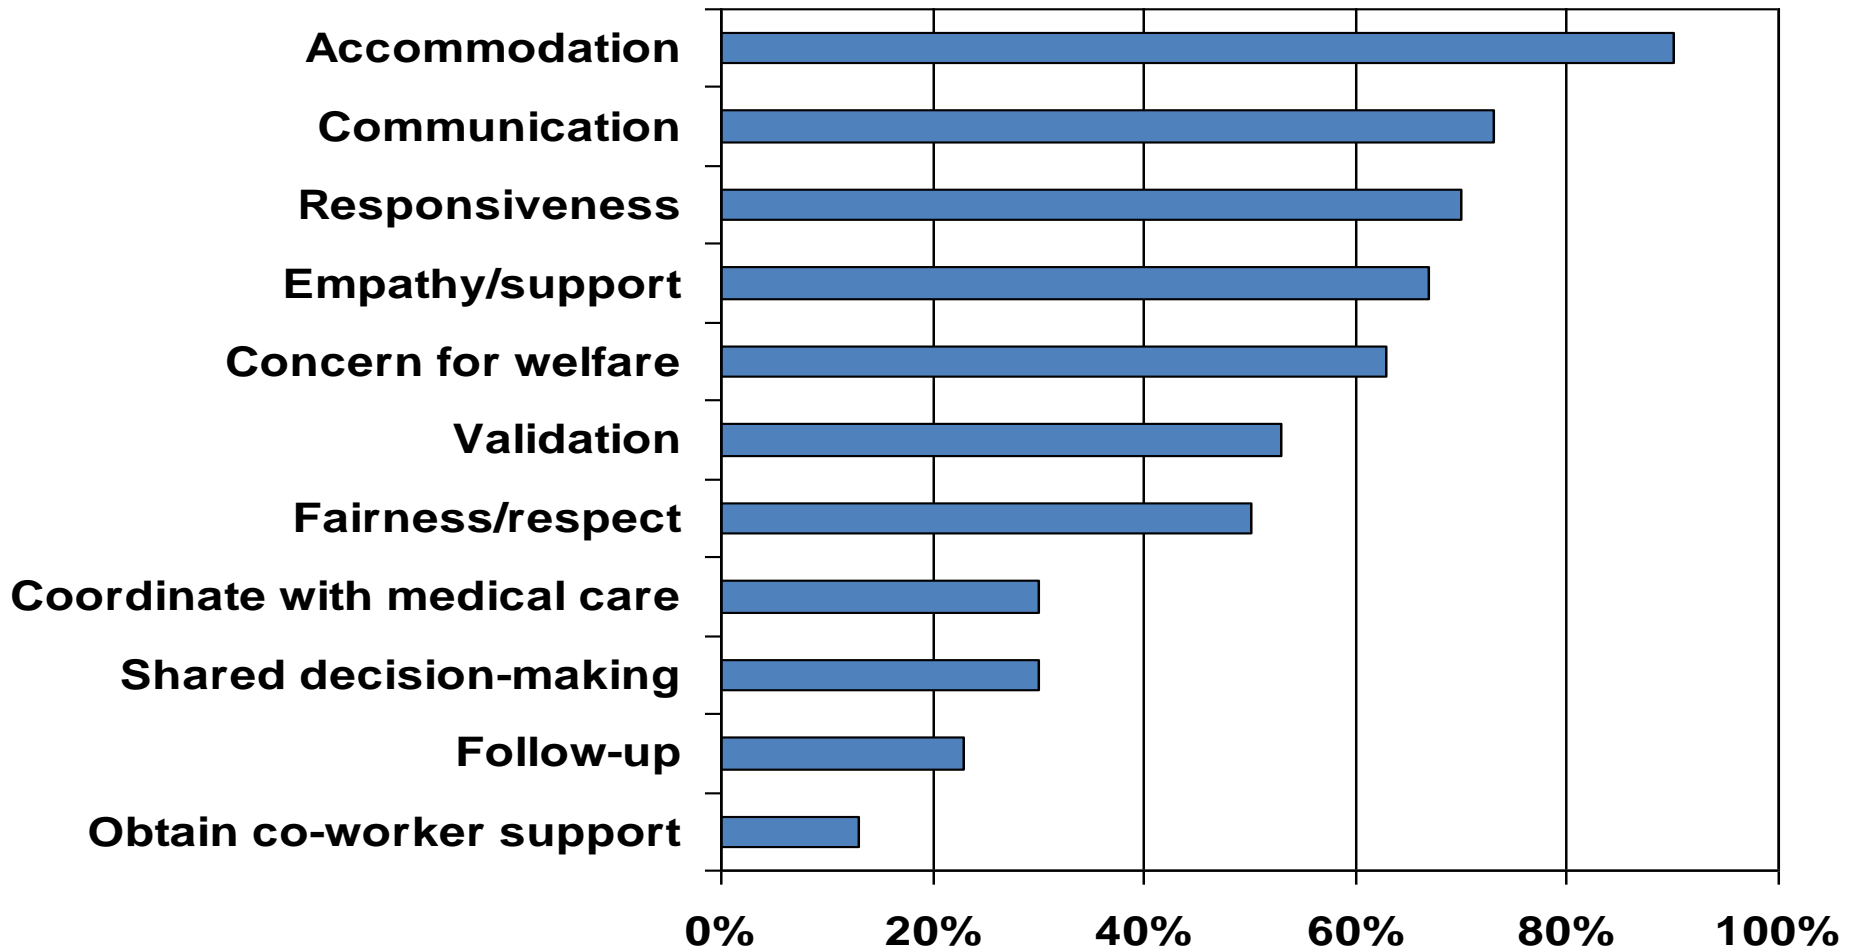

- A supervisor's role is to develop employees and monitor their performance.
- This puts the supervisor in a pivotal position to observe changes in behaviour and the emergence of physical, mental and personal problems for employees returning to work.
- Early recognition of problems, intervention and support during the early stages of treatment are keys to achieving effective results.

But

There are big gaps in:

- Supervisor understanding of how to be effective in return to work
- Expectations about their role

Employee expectations of supervisor

Supervisors' concept of their role

- Complete injury report (90%)
- Assess validity of claim (65%)
- Protect company (53%)
- Communicate with worker (41%)
- Include worker in process (30%)

Trained supervisors

Research has shown trained supervisors

- Report greater job satisfaction
- Have less claims in their area
- Have less claims where the employee is off work

How to train supervisor

- Let them know what's in it for them
 - ↓ stress as employee productivity increases
 - ↓ workplace accidents and illnesses as ergonomic principles are applied
 - ↓ staff turnover when an experienced team member is retained
 - Demonstrated leadership role within the company
 - ↑ skills in communicating effectively
 - ↑ confidence in abilities
 - ↑ support from other units or teams within the company

How to train supervisor

- Case discussion
- Formal training
- Use of questionnaire
- Use of survey
- Talk money
- Involve their boss

Manager support for return to work: A check list

Employee's name:

Manager's name:

Date of first absence:

Realising the Health Benefits of Work

Work Is Generally Good For Your Health

Health impacts include:

- Increased rates of mortality;
 - Poorer physical health, including increased rates of:
 - o cardiovascular disease;
 - o lung cancer; and
 - o susceptibility to respiratory infections;
 - Poorer mental health and psychological well-being;
 - Somatic complaints;
 - Long-standing illness;
 - Disability; and
 - Higher rates of medical consultation, medication consumption and hospital admission.
- Suicide in young men > 6 months out of work is increased x40
 - Suicide rate in general increased x6 in longer-term worklessness
 - Health risk and life expectancy greater than many “killer diseases”
 - Greater risk than most dangerous jobs (construction/forestry)

Social costs

Social

- Families, including the **children** of parents out of work, have decreased educational opportunities and reduced long term employment prospects;
- Individuals suffer a loss of social identity and status; and
- Exclusion from employment

Workplace

- Direct costs
- Indirect costs
- X4-13 times direct costs
- Reputation
- Morale
- Other time – fines, court

Consensus statement

Government, employers, unions, insurance companies, legal practitioners, advocacy groups, and the medical, nursing and allied health professions all have a role to play in promoting the health benefits of work.

Through actions appropriate to our various areas of responsibility or activity, we agree to:

- Promote awareness of the health benefits of work;
- Offer support and encouragement to those attempting to access the health benefits of work;
- Encourage employers' continuing support of workers' occupational health; and;
- Advocate for continuous improvement in public policy around work and health, in line with the principles articulated above.

Messaging

- Being taken up by various groups
- Needs to be used for the WELL BEING of people
- If used as a stick the message will be damaged

Messaging

- Work out how you can talk to people
- In a way that works for you and works for them

You

*Enjoy
work*

*Be
effective*

*Sustain
enthusiasm*

Summary of Well-Being Theory - PERMA

1. Positive emotion

- Increasable by 10-15%
- *Losada* relationship: Flourishing companies have a ratio of positive to negative words in company meetings over 2.9:1 (stagnant 1-2.9:1, going under <1:1)

2. Engagement

3. Relationships

4. Meaning and purpose

5. Accomplishment

<http://www.abc.net.au/tv/bigideas/stories/2012/04/30/3489669.htm>

<http://www.authentic happiness.sas.upenn.edu/Default.aspx>

Relationships - start to use Active Constructive

Passive constructive	Active constructive
Passive destructive	Active destructive

Work your strengths

Identify your strengths

1. Creativity
2. Curiosity
3. Open Mindedness
4. Love of Learning
5. Perspective
6. Bravery
7. Persistence
8. Integrity
9. Vitality
10. Love
11. Kindness
12. Social intelligence
13. Citizenship
14. Fairness
15. Leadership
16. Forgiveness
17. Humility
18. Prudence

Work your strengths cont'd

Then use them in your everyday practice

Statistics @ 6 months

Less depression

Less anxiety

More job satisfaction

(Better results)

5 tips to build trust & gain information:

1. Be yourself

- It's not about you, it's about them

2. Don't pretend to understand if you don't

3. Listen actively

4. Deliver on promises

- DON'T make promises you can't keep

5. Ask what you want to know

Worker may feel

- Employer/Insurer is interested in saving costs
- Employer feels injured worker is a hassle & no longer a valued team member
- Employer is supportive because legislation requires it
- Employer wants to get rid of them
- Can't trust employer because they were injured whilst working for them
- Other feelings of distrust based on circumstances/culture of organisation/history

Developing trust

1. Don't try to act genuine, be yourself

- People are aware of authenticity
- When you're authentic it becomes more about the other person

2. Don't pretend to understand what they are going through if you don't

- Ask them to tell you
- Say things like “It must be hard....”, “I can't imagine....”, “How are you coping with....?”
- Make sure you stimulate a response – avoid telling them how they feel, ask questions

3. LISTEN & hear what they are saying

- Most people will tell you what they want / need
- Some will rant & rave
 - You learn from listening & letting them vent
 - Some will talk themselves through their issues
 - Most will actually apologize to you & thank you once they have vented

4. Deliver on promises

- If you can't make a promise, say you will find out and then follow through
- If you can't deliver, give them:
 - Reasons why
 - Alternatives – stay away from closed responses such as “No”

Broken Promise = Broken Trust

Under promise and over deliver

Ask away, if there is trust

They may have already told you what you want to know.

If not:

5. Ask them what you want to know

- Start gently/subtly and see how they respond
- Depending on personality or the relationship you have built, you may be able to ask blunt questions

Meaning and purpose

People have higher levels of well-being when they are doing something for others

May be small, such as providing simple information

May be large, such as achieving a difficult return to work
